<u>Milestone 3 Feedback Summary</u>

Summary of feedback and tasks to do

      Overall the project is on-track. We need to add admin accounts as well as add the notification system. We also need to make our logo clickable to the home page for easier access. We also need to update the GitHub repo with the up-to-date project URL and other credentials. Lastly, we need to implement all P1s that we have finalized on.

List of tasks the team chose to focus on and implement

- Make logo clickable to home page
- Update Github repo
- Add admin account
- Implement notifications
- Finalize P1s and implement

List of P1 functions agreed at the meeting

1. Have a working application to help SFSU students to find their dream jobs
2. The web application must allow Tech companies to post jobs in 9 areas.
3. It will allow us to search & filter jobs based on tech areas, job titles
4. Users can get alerts for matching job interests
5. Users can turn off alerts if needed.
6. The site will have administrator capabilities to trigger the matching alerts
7. The site will have login and sign-up pages for users.
8. Each user will have a profile page.
9. The application will focus on desktop/laptop browsers
10. The site will utilize a user database set for storing all user information and postings.
11. Recruiters will be able to post job listings
12. Users can change or edit their search on the same page.
13. Users can search job listings without registering or logging into their account.
14. User credentials will be encrypted.
15. Users can navigate the Helpful Links page without an account.
